

Street Sign Inventory, Retro-Reflectivity Compliance Evaluation, and Replacement Policy

It is the stated objective of the City of Stacy, Chisago County, MN to maintain its city streets in a safe but cost effective manner. As part of its maintenance efforts, the City of Stacy recognizes that regulatory, warning, and directional street signs (commonly referred to collectively as safety signs), including but not limited to stop signs, yield signs and other similar traffic control devices, need to be properly inventoried, assessed for compliance with applicable retro-reflectivity standards, maintained, and replaced from time to time. The City of Stacy further recognizes that when signs are installed within city street rights-of-way they must comply with state and federal regulations as primarily outlined in the Manual on Uniform Traffic Control Devices. As part of its efforts to comply with applicable regulations, the City Council of Stacy shall be guided by the following plan adopted in accordance with Section 2A.08 of the Manual on Uniform Traffic Control Devices:

1. **Inventory.** In recognition of the importance of knowing the number, type, and location of street signs situated in city street rights-of-way, it is the intent of the City Council to have any inventory of all city street signs completed by December 31, 2013. The completed inventory shall be maintained electronically and shall be updated each time a sign is installed, replaced, or removed. The inventory shall indicate the type of sign, the number of each type of sign, the location of each sign including the direction the sign faces, the date of installation (when known for pre-existing signs), type of material used on sign face (when known), a general statement on the condition of the sign, a record of any maintenance performed on the sign, and the date of sign removal if applicable.
2. **Removal of Excess Signs.** In recognition of the fact that excess street signs have been shown to reduce the effectiveness of signage, as well as impose an unnecessary financial burden on the street authority, it shall be the policy of the City of Stacy to remove signs determined to be unnecessary for safety purposes and which are not otherwise required to comply with an applicable state or federal statute or regulation. The removal of signs shall be based on an engineering study and the Manual on Uniform Traffic Control Devices. Particular attention shall be paid to recommendations on signage for streets considered to

be “low-volume” under the Manual on Uniform Traffic Control Devices as adopted by the State.

3. Retro-reflectivity Evaluation. In recognition of the new retro-reflectivity standards adopted into the Manual on Uniform Traffic Control Devices by the Federal Highway Administration, the City Council shall arrange to have all city street signs not removed under section 2 above evaluated for compliance with the applicable retro-reflectivity standards. It shall be the intent of the city to conduct this evaluation using one of the following methods as authorized by the Manual on Uniform Traffic Control Devices rules:
 - a. Visual Nighttime Inspection Method
 - i. Utilizing Calibration Sign Procedure
or
 - ii. Utilizing Comparison Panel Procedure

It shall be the intent of the city council to have this evaluation completed by December 31, 2013. The council reserves the right to change which evaluation method will be utilized as expressly found necessary by the council due to budgetary constraints or other practical difficulties in completing this process.

4. Sign Replacement. After completion of the inventory, removal of unnecessary signs, and proper retro-reflectivity evaluation, the city council hereby establishes the following priority order in which street signs will be replaced:
 - a. First priority shall be given to replacing all signs determined not to meet applicable retro-reflectivity standards. Top priority shall also be given to replacing missing or damaged signs determined to be of a priority for safety purposes.
 - b. Second priority shall be given to signs determined to be marginal in their retro-reflectivity evaluation.
 - c. Third priority shall be given to all remaining signs as they come to the end of their anticipated service life, become damaged, etc.

In addition, within each category above, further priority shall be given to warning and regulatory signs on streets with higher vehicle usage.

5. On-going Maintenance. The city shall include a general inspection of street signs in city rights-of-way as part of its annual street inspections. The city shall update its sign inventory as provided in section 1. After the initial replacement of signs

as provided for in Section 4, the city shall, for the purpose of complying with the requirements of the Manual on Uniform Traffic Control Devices to maintain minimum retro-reflectivity standards, shall, as budgetary factors allow, replace signs as they reach the end of the latter of their (a) warranty period; (b) expected life expectancy for the facing material used on the sign; or (c) expected life as determined by an authorized engineering study. Damaged, stolen, or missing signs may be replaced as needed.

Adopted by the City of Stacy, January 10, 2012

Mayor, Mark Utecht

Clerk, Sharon MT Payne
